

RAT ZAPPER QUICK START GUIDE

Battery Compartment:

The Rat Zapper battery compartment is located on the top of the unit. Pull the securing tap back and lift the battery compartment door. Properly install 4"AA" batteries in the black battery holder and re-secure the lid to the battery compartment.

Recommended Batteries: The performance of your Rat Zapper will depend upon:

- 1) The quality of batteries (see chart below):
- 2) The amount of time your Rat Zapper is turned on::
- 3) The number of rodents killed.

OK to Use	Battery Type	Expected Use
YES	Energizer E2 Lithiums	These batteries cost more, but provide great performance and a much longer life than other batteries. You'll get up to 30 kills per set.
YES	Duracell Ultras with M3 Technology or Energizer E2 Titaniums	These batteries are affordably priced and will provide a maximum life of 30 to 60 days, depending on amount of usage. You'll get up to 10 kills per set.
OKAY	Alkaline Batteries	These batteries have a limited life and fewer kills per set than the others.
NO	Heavy Duty, Super Heavy Duty, Extra Heavy Duty, Carbon Zinc, non- alkaline	Will NOT work in the Ret Zapper
NO	NiCad (Nickel Cadmium) or NMH Rechargeables	Will NOT work in the Ret Zapper
OPTIONAL	Rat Pack attachment. Allows you to use 4 D-cell batteries with any Rat Zapper 2000. Batteries not included.	Great for larger rodent infestations. Performance equivalent to the AA Energizer E2 Lithiums

What does the red light on the Rat Zapper mean?

There are two uses for the light on the Rat Zapper.

- 1) **Battery check-** every time you turn the Rat Zapper on, the light will blink on then off to let you know the batteries are good. If the light starts to dim you should replace the batteries with fresh batteries. (see Recommended Batteries chart above.)
- 2) **Rodent Check-** The light will repeatedly blink when the Rat Zapper needs to be emptied. Just hold the Rat Zapper over an appropriate receptacle, tilt it, and let the rodent slide out.
- 3) **To reset the Rat Zapper-** Turn it OFF, then re-bait and place the unit on a flat surface where you suspect rodents exist. Then, turn the Rat Zapper ON again.

Recommended Cleaning :(Remove batteries)

If dust, dirt or other contaminants accumulate in the Rat Zapper, you may need to do some cleaning. You will usually know if cleaning is needed because the Rat Zapper may buzz or the light will blink repeatedly when you turn it on. **Remove batteries before cleaning for safety.**

1. We recommend that you use an inexpensive thin aluminum pan approximately 2 inches deep and large enough, in width and length, to accommodate the Rat Zapper.
2. Fill the pan with approximately 1 inch of warm/hot water, with ample amount of dish detergent. Set the Rat Zapper in the pan and let it soak for approximately 1 hour (to loosen debris.)
3. Using a soft bristle or bottle brush commonly found in the cookware section of you local supermarket, gently brush the bottom of your Rat Zapper.
4. To rinse, carefully allow a gentle stream of fresh water to flow over the cleaned bottom surface of the Rat Zapper. Do not spray the unit out or allow moisture to intrude into the electronics that are housed at the top of the unit, as this may cause the electronics to short out and impair the performance
5. After cleaning the bottom of the Rat Zapper thoroughly, stand the unit on end (with open end on bottom) to accelerate the drying process. When the Rat Zapper is completely dry, put it back into service.

Can The Rat Zapper Be Used Outdoors?

Yes it can. However if the moisture intrudes into your Rat Zapper it can damage the electronics or "trip" the circuit so that you will not be successful in eradicating the intended rodents. The best solution for continuous use outdoors is to purchase a PVC tube that is 6" in diameter and approximately 18" in length. Also purchase a cap for one end of the PVC tube. After outfitting the Rat Zapper with quality batteries and baiting the unit with dry bait, place the Rat Zapper in the tube so that the back end of the Rat Zapper is toward the capped end of the PVC tube. Place the PVC tube containing the Rat Zapper in a location of suspected rodent activity and secure the tube so that it will not roll or rock when the rodent enters the tube or Rat Zapper. Rodents do not want to enter anything that does not provide stable footing. Another temporary solution for the outdoor use of the Rat Zapper is to place the unit under a weather-proofed tarp, or you can place the unit in a plastic freezer bag that completely covers the Rat Zapper except for the entry. Use a rubber band to secure the plastic bag to the Rat Zapper

Money Back Guarantee

The Rat Zapper comes with a 30-Day, money back guarantee with proof of purchase, If, for any reason, you are not satisfied, please contact our Customer Service Department at 888-DEAD RAT.

Limited Warranty

Agrizap, Inc. provides a one-year parts and labor warranty that the Rat Zapper will be free from defects in workmanship and materials. Agrizap Inc.'s obligation under this warranty shall be limited to repairing or replacing any part of the product which is defective. Service and free return shipping can be arranged by contacting us at 888-DEAD RAT. **Warranty does not apply in the event of misuse or abuse of the product or as the result of unauthorized repairs or alterations.**
